Summary Modify Template Title/Desc.

Title: University-Wide template

Description - *this is for you or other admins, place notes or comments about this template here*

Template to be applied to all course evaluations

☑ Hierarchy Template

Cancel

School/College ▼		▼
University	School of Architecture	
School/College	School of Art & Design	
Department	School of Business	
	School of Education	

Save

Clicking the 'Hierarchy Template' box would cause a new field to appear where the user selects which level of the hierarchy to apply the template to. Options would be University, School/College, or Department. Note that these choices should probably only be available to users who have access to them, so only a super eval admin would see all three choices.

Selecting School/College or Department would cause another field to appear which would contain the appropriate options based on the choice made on the previous field. These choices would be based on the hierarchy setup.

Continue to Assign to Courses

This would be a new page that only appears when the 'official' box is checked. It would pull in the University and School hierarchies (as defined on the interface to create hierarchies). It also shows the template that was selected in the first step of adding an evaluation for the Department-level hierarchy. Users could view a preview, which would pull all the questions from each level together into one eval.

This page can remain as is, however, here are some features that could make it more user-friendly:
- limit the selection to only the classes that the user has permission to (based on the Eval Admin interface)
- make the titles sortable
- show if the class is a lecture, lab, discussion, etc (not sure if Sakai would even have this data to display)
